U. S. Department of Agriculture
Agricultural Marketing Service
and
National Agricultural Statistics Service

ACKNOWLEDGMENT

The acreage, production, utilization, monthly and season average price, and crop value statistics for Florida as shown in this summary are official estimates of the Florida Agricultural Statistics Service. Corresponding data for other citrus states are from official reports of the USDA, National Agricultural Statistics Service. Canned and frozen pack statistics were compiled by the Florida Citrus Processors Association. Where data are from other sources, appropriate references appear.

Records of the Division of Fruit and Vegetable Inspection, Florida Department of Agriculture and Consumer Services, were used in preparing production and utilization estimates. The Citrus Administrative Committee assisted in assembling these data.

Many producers, shippers, processors, sales agencies, transportation firms, and others associated with the citrus industry voluntarily supplied basic data used to develop these statistics. Their contributions are sincerely appreciated.

This report was assembled under the direction of James W. Todd and Robert R. Terry of the Florida Agricultural Statistics Service.

1986-87 PRODUCTION AND TREE CENSUS

PRODUCTION

Florida's season began with open bloom occurring in mid-to-late March. Trees in the northern producing counties that survived the 1983 and 1985 freezes experienced good bloom.

No freezing weather occurred during the winter to affect production of the 1986-87 orange crop of 119.7 million boxes. This was 500,000 boxes more than the 1985-86 season's 119.2 million boxes and 15 percent more than the 1984-85 season production of 103.9 million boxes.

Grapefruit production at 49.8 million boxes was 6.5 percent more than the previous season's 46.75 million boxes and the highest since the 50.3 million boxes produced in the 1980-81 season. Fresh shipments of almost 21 million boxes was an all time record for Florida grapefruit.

Except for limes, production of all other types was higher with tangelos increasing to 4.0 million boxes. With the absence of freezing weather, fresh usage was the highest in several seasons.

FCOJ final yield was a record 1.50827 for all oranges with early and midseason varieties yielding 1.44643 gallons per box and Valencias yielding 1.59621 per box.

California's production of oranges at 58.5 million boxes was the highest since the 1982-83 season total of 76.1 million boxes. Grapefruit production at 9.1 million boxes was a record.

Arizona orange production was 3.15 million boxes, the highest in several seasons. Grapefruit production dropped, however, to 2.2 million boxes.

Texas production continued to increase since the devastating freeze of 1983. Orange utilization was almost 1 million boxes and grapefruit almost 2 million boxes.

TREE CENSUS

The Florida Agricultural Statistics Service first began indexing the State's commercial citrus groves on aerial photography as of January 1966. Ground crews identify all the State's groves by fruit type, row spacing, and year in which set. Photo interpreters in the Orlando office then delineate the groves by variety blocks on photo transparencies at a scale of 1 inch to 660 feet. Variety blocks are measured with planimeters to obtain acreage and then indexed by land section.

The inventory was designed for quick and economical updating. Since 1966, the citrus belt has been resurveyed each second winter—1968 through 1986—to determine changes. Photographing begins in November when weather conditions are most favorable and is generally completed in 80 to 90 days. The same three-mile-wide flight lines established in 1966 are photographed on each succeeding flight. Approximately 14,000 square miles of photography is obtained at a 1 to 30,000 scale.

The last statewide survey was conducted as of January 1986. A total of 624,492 acres of all types of citrus planted through 1985 was reported, down from the 761,365 acres reported as of January 1984. This 18 percent loss is the largest two year reduction reported since the tree census program began in 1966.

The largest losses occurred in the Northern, upper Central, and upper West Coast counties. Acreage by counties and types is shown on page 27.

Photography for the latest survey began in November 1987 and field work will update the acreage records as of January 1988.

FLORIDA, ALL CITRUS: Acres in commercial groves as of January, 1966 - 1986, with percent changes

1986	624,492	-18.0 -27.2

1986-87 VALUE OF SALES, PRICES AND EXPORTS

VALUE

The preliminary on-tree value of all citrus for the 1986-87 season is \$889 million. This is 23 percent more than the revised 1985-86 season value of \$725 million. The record high value was \$1.037 billion in the 1979-80 season.

Preliminary value is based on that part of the crop that was priced at harvest, about 30 percent of the total. When all participation plans and cooperative pool prices are finalized, a revised value is calculated.

Preliminary orange prices increased to \$4.80 per box from a revised \$3.94 for the previous season. Fresh prices increased to \$6.18 from \$5.33. Processing prices increased from \$3.83 to \$4.69 per box. Total orange value was \$575 million, an increase of 22 percent from the previous season's \$470 million.

All grapefruit prices increased from the previous season. The preliminary \$4.96 per box is a record high, compared with a revised \$4.09 per box the previous season.

While most specialty crop processing prices increased, fresh prices were mostly lower. Total value of these crops decreased slightly.

The 1986-87 season average delivered-in price of fruit going into FCOJ at processing plants was \$6.69 per box or \$1.08 per pound of solids. Early-mids averaged \$6.06 per box or \$1.02 per pound solids and Valencias averaged \$7.67 per box or \$1.16 per pound solids.

1981-82	713,380	::	1986-87 2/	889,401

1/ Revised. 2/ Preliminary.

FOREIGN EXPORTS

Exports of fresh citrus during 1986-87 to countries other than Mexico and Canada were a record high 15,864,000 4/5-bushel cartons up substantially from the 11,284,000 cartons shipped in 1985-86. Grapefruit accounted for 15,482,000 cartons of this total with Japan taking 8,916,000 cartons. Orange exports increased from 202,000 to 382,000 cartons. No tangerines were exported.

A total of 7.4 million gallons of FCOJ were exported in the 1986-87 season, down by 6 percent from the 7.9 million gallons shipped during the 1985-86 season. Canada continues to be the major market for U.S. exports. There were 3.4 million gallons of concentrated grapefruit juice exported, as compared with 2.4 million gallons in 1985-86.

PRICES

All on-tree prices represent the average price received by growers for their fruit by types. Prices are based on records of commercial fresh fruit sales and processed fruit returns. The term "on-tree" relates to fruit value before it is picked and hauled from the grove. Each season, beginning with the first month that three percent of a fruit type is harvested, monthly estimates are computed. Reports from fresh fruit sales organizations and from packers provide data for an average f.o.b. price. Processors report an average spot and cash price for fruit delivered to their plants. From these values, an estimated charge for picking, hauling, and packing is deducted to arrive at an on-tree price. The anticipated box utilization for the month is used to combine the fresh and processing price to obtain an average price for all methods of sales. At the end of the season, monthly price averages are computed and weighted by boxes utilized, to provide the preliminary season average price.

A year later, after most processed products are sold, cooperatives and firms with participation plans report prices of fruit they handled. These prices, combined with the spot and cash prices collected earlier, are weighted together, by varieties, to determine the final processing price received by growers. From this price, charges for picking, hauling, and packing, as estimated by University of Florida economists, are deducted to arrive at the final on-tree price received by growers.

COUNTY PRODUCTION

Estimates of citrus production by counties were prepared from objective survey data obtained from the citrus crop estimates program. Production for Florida has been distributed to counties based on the biennial citrus tree census, limb count survey data adjusted for dropage to end of season, and size data at maturity.

Tree numbers by county which are used in the estimates were obtained from the latest tree census. Data on production are obtained from several objective fruit surveys: limb count, size, and dropage samples. Because of the statistical sampling design, counties with higher production in general have a greater number of fruit samples and, therefore, estimates for these counties can be considered more reliable. Thus, for the same reason, estimates for the production areas are more reliable than for individual counties.

History of Florida's Citrus Industry

The citrus tree is a native of the Orient. From there it was carried ever westward by man, to India, to the Mediterranean and on across the Atlantic. Citrus was brought to the Americas by Columbus. When he landed on November 22, 1493, he brought citrus seeds that were planted on the island of Haiti. The first seeds planted on the mainland of the Americas were brought by the expedition of Juan de Grijalva when he landed in Central America between July 12 and July 20, 1518. The exact date of the introduction of citrus trees into Florida is not known, but from a statement made by Pedro Medendez, dated April 2, 1579, it appears that citrus fruits were grown in abundance around St. Augustine at that time. Early settlers in Florida some two centuries later found wild citrus trees scattered over the State. One of the oldest, cultivated groves planted in Florida (Hume, 1926 p.95) is thought to have been the Don Phillippe grove in Pinellas County, planted sometime between 1809 and 1820.

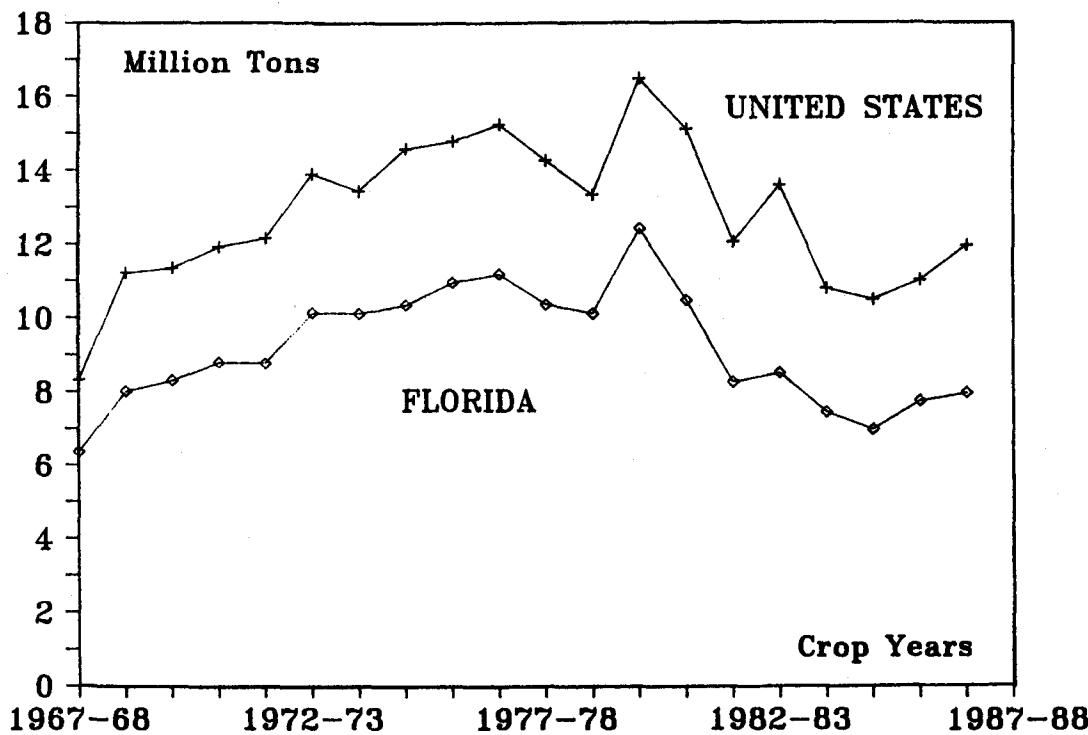

Citrus production in Florida had reached an all time high of more than 5 million boxes when the Great Freeze of 1894-95 almost totally wiped out the citrus industry. It was not until 1909-10 that this level was reached again. Since that time the volume steadily increased. In 1986-87, Florida had 67.3 percent of the Nation's production.

Footnote 2/ for page 32, 1/ for pages 33 and 34. Final Mexican shipments to the U. S. are reported by FAS as a combined total for oranges and tangerines. The total shown on pages 32 through 34 has been broken down proportionally into oranges and tangerines from Plant Quarantine data reported at the time of the crossing. Plant Quarantine releases give separate totals for these two types of citrus. Mexican shipments, through the U.S. to Canada are not included.
